Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).
2. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).
3. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
4. The subject matter as claimed in claims 1-18 and 36-127 in the instant application is fully disclosed in claims 1-45 in the patent 6,631,435. They are not patentably distinct from each other. See *Blumcraft of Pittsburgh v. Ladd*, 144 USPQ 562 (D.D.C. 1965). Furthermore, there is no apparent reason why applicant was prevented from presenting an embodiment corresponding to that of the instant

application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968).

Examiner's Statement of Reasons for Allowance

5. The following is an Examiner's statement of reasons for the indication of allowable subject matter: Claims 1, 36, 54, 96 and 114 are allowable over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found any motivation to combine any of the said prior arts. Prior art fails to teach an isochroous interface layer coupled to communicate with the one or more applications and the transaction layer to provide an interface to the one or more applications and the transaction layer to provide an interface to provide an interface to the one or more applications to control isochroous data operations to and from the one or more application over the bus structure, wherein the isochroous interface layer allocates resources necessary for the data operations and controls the isochroous data flow between the one or more applications and the bus structure including managing buffers for the application utilized in the data operation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
